

UI/UX Design Project Documentation

Project: Healthcare / Medical Mobile App Wireframe

1. Project Overview

This project is a low-fidelity UI/UX wireframe for a healthcare mobile application. The main goal of the app is to help users manage their health, book appointments, track medical records, and manage medications in a simple and user-friendly way.

2. Problem Statement

Many users face difficulties in managing doctor appointments, medications, and health records in one place. This application aims to provide an easy-to-use platform for healthcare management.

3. Objectives

- Easy user registration and login
- Doctor search and appointment booking
- Medication tracking
- Health tracker management
- Simple and clean mobile interface

4. Screens Included

Welcome Screen: Displays logo, app purpose, and get started button.

Registration Screen: Allows users to sign up using phone/email and password.

Login Screen: User authentication with social sign-in options.

Home Dashboard: Shows appointments, trackers, and categories.

Doctor Search: Users can search doctors and book appointments.

Medication Screen: Displays medicine reminders and dosage tracking.

5. Design Approach

The design follows a minimal and user-friendly approach. Low-fidelity wireframes were created to focus on layout, navigation, and functionality before final UI development.

6. Conclusion

This UI/UX design project provides a healthcare solution with easy navigation and essential healthcare features. The wireframe helps visualize the app structure before moving to high-fidelity design and development.
